Project Design Phase–II

Data Flow Diagram & User Stories

Date	24 March 2026
Team ID	69bf7f20c1eab70902258904
Project Name	Automating Data Import and Relationship Mapping Using Import Sets & Dot Walking
Maximum Marks	4 Marks

Data Flow Diagrams

A Data Flow Diagram (DFD) represents how data moves through the system, how it is processed, and where it is stored. For your project, the focus is on **importing external data, transforming it, and mapping relationships using dot walking**.

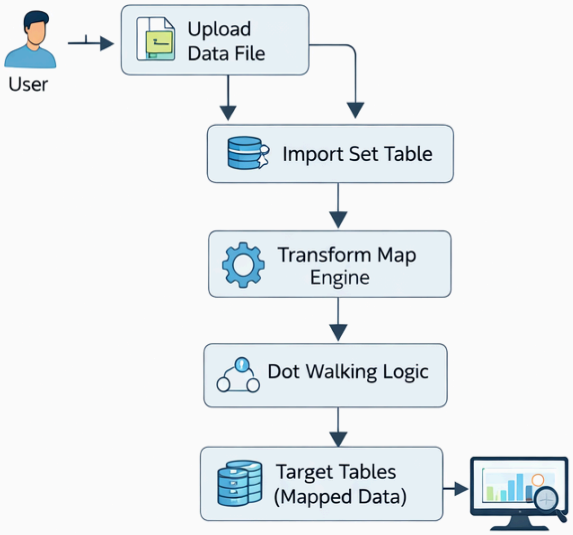
DFD Level 0 (Overview)

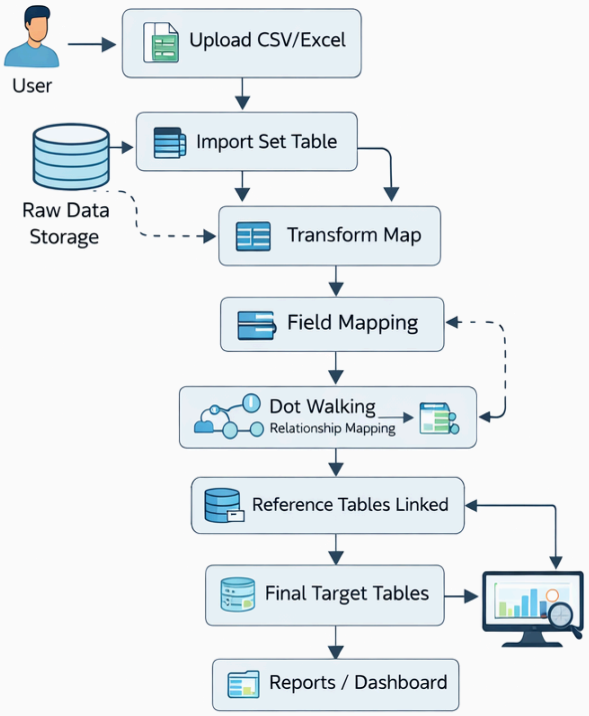
Flow Explanation

1. User uploads data file (CSV/Excel).
2. System stores data in Import Set Table.
3. Transform Map processes and maps fields.
4. Dot Walking establishes relationships between tables.
5. Clean data is stored in Target Tables.

User Type	Functional Requirement (Epic)	User Story No	User Story / Task	Acceptance Criteria	Priority	Release
Admin	Data Import	USN-1	As an admin, I can upload CSV/Excel files into the system	File uploads successfully without errors	High	Sprint-1
Admin	Data Validation	USN-2	As an admin, I can validate imported data before processing	Invalid records are flagged	High	Sprint-1
Admin	Transform Map	USN-3	As an admin, I can define field mappings between source and target tables	Fields are correctly mapped	High	Sprint-1
Admin	Dot Walking	USN-4	As an admin, I can use dot walking to map relationships between tables	Related records are linked correctly	High	Sprint-2
Admin	Data Processing	USN-5	As an admin, I can execute transformation to move data into target tables	Data moves without loss or duplication	High	Sprint-2
User	Data Viewing	USN-6	As a user, I can view processed and structured data	Data is displayed correctly	Medium	Sprint-2
User	Reports	USN-7	As a user, I can generate reports from processed data	Reports show accurate information	Medium	Sprint-3
Admin	Error Handling	USN-8	As an admin, I can view error logs for failed imports	Errors are logged and visible	High	Sprint-2
Admin	Automation	USN-9	As an admin, I can automate recurring data imports	Scheduled jobs run successfully	Low	Sprint-3

Example: DFD Level 0 (Overview)



1. User uploads data file (CSV/Excel).
2. System stores data in Import Set Table.
3. Transform Map processes and mapps fields.
4. Dot Walking establishes relationships between tables.
5. Clean data is stored in Target Tables.
6. User views processed data.


Example: DFD Level 1 (Detailed)
